## Istation

# Linking NWEA MAP Math to Istation Math 

PREPARED BY

Matthew Jeans, PhD

## DATE

January 2024

## Executive Summary

This study provides the proficiency projection of the Istation Math formative assessment on the NWEA MAP Math assessments for kindergarten through fifth grades. Classification accuracy is also provided. Samples were kindergarten to fifthgrade students in two school districts in Texas and Idaho in the 2022-2023 school year. There were 1,269 students from District A and 3,755 from District B, accounting for 5,024 students. Students took Istation math at the beginning of the year (BOY), middle of the year (MOY), and end of the year (EOY) assessment months, and NWEA MAP during the fall, winter, and spring assessment months. Due to limited MOY data, fifth grade students were only included in EOY analyses.

#### Abstract

The Pearson Product Moment correlations of Istation Math MOY and NWEA MAP Math at winter benchmarking range from 0.84 to 0.89 and 0.82 to 0.86 for Istation Math EOY and NWEA MAP Math at spring benchmarking. They indicate strong relationships between Istation Math and the NWEA MAP Math assessments.

The linking study between NWEA MAP and Istation Math is conducted using multinomial logistic regression. A low probability of attaining a level was $\leq .330$, a medium probability of attaining a level was .331-.660, and a high probability of attaining a level was set at $\geq .661$.

At MOY, to achieve a high probability of attaining the NWEA MAP Average category, students had to attain Istation Math scores at the following percentile ranks:

Kindergarten: 50th<br>First grade: 60th<br>Second grade: 45th<br>Third Grade: 35th<br>Fourth Grade: 35th

To achieve a high probability of attaining the NWEA MAP High category, students had to attain Istation Math scores at the following percentile ranks:

Kindergarten: 90th
First grade: 99th
Second grade: 85th
Third Grade: 75th
Fourth Grade: 85th

At EOY, students had to attain Istation Math scores at the following percentile ranks to have a high probability of attaining the NWEA MAP Average category:

Kindergarten: 55th
First grade: 70th
Second grade: 40th
Third Grade: 35th
Fourth Grade: 45th
Fifth Grade: 50th

To achieve a high probability of attaining the NWEA MAP High category, students had to attain Istation Math scores at the following percentile ranks:

Kindergarten: 90th<br>First grade: 99th<br>Second grade: 85th<br>Third Grade: 85th<br>Fourth Grade: 95th<br>Fifth Grade: 95th

Classification accuracy analyses were conducted. At MOY, the AUC ranged from 0.81 to 0.87 , indicating that the percentage of students correctly classified on the Istation Math with respect to the NWEA MAP was approximately $85 \%$ across grades. Sensitivity ranged from 0.85 to 0.92 , indicating that approximately $88 \%$ of students who performed below the cut point on Istation Math did not meet Average or above on the NWEA MAP assessment. Specificity ranged from 0.72 to 0.89 , indicating that approximately $82 \%$ of students who performed above the cut point on Istation Math met the Average or above on the NWEA MAP. Istation Math accurately predicted meeting math proficiency on NWEA MAP about 85\% of the time at the MOY.

At EOY, the AUC ranged from 0.85 to 0.89 , indicating that approximately $87 \%$ of students were correctly classified on the Istation Math with respect to the NWEA MAP
assessment across grades. Sensitivity ranged from 0.80 to 0.92 , indicating that approximately $87 \%$ of students who performed below the cut point on Istation Math did not meet the Average category or above on NWEA MAP. Specificity ranged from 0.83 to 0.95 , indicating that approximately $87 \%$ of students who performed above the cut point on Istation Math met the Average or above on the NWEA MAP assessment. Istation Math accurately predicted meeting math proficiency on NWEA MAP about $87 \%$ of the time at EOY.

## Introduction

This study provides the proficiency projection of the Istation Math formative assessment observed scores on the NWEA MAP Math scores for kindergarten through fifth grades. Students took these two assessments during the same school year, and a correlational study and classification accuracy were also conducted.

In the context of the evolving educational landscape, particularly post-pandemic, the importance of consistent and accurate assessment in math proficiency has been highlighted. Significant learning losses occurred due to the COVID-19 pandemic, and recent research has shown slower recovery in math skills compared to reading skills among students since the onset of the pandemic (Patarapichayatham \& Locke, 2023). Despite the slow rate of learning recovery, students have been making positive gains in the years following the pandemic (Patarapichayatham \& Locke, 2023; Hampel, 2023). This trend, as evidenced by the Istation Math scores, underscores the significance of regular formative assessments in tracking and supporting student growth. Furthermore, Istation emphasizes the value of longitudinal data in understanding and enhancing student learning trajectories in math. These insights provide a backdrop for the current study, underscoring its contribution to the broader effort of improving math education and aiding in monitoring performance postpandemic.

Regular administration of Istation formative assessments, either monthly or three times each year during benchmarking assessment months, and the administration of NWEA MAP three times per year under benchmarking assessment months, presents an opportunity to conduct a linking study between the Istation Math and NWEA MAP Math assessments. The results from this study can be helpful for teachers and school administrators to prepare students for NWEA MAP Math in the spring.

The Istation Math formative assessment has strong correlations with other state assessments, and linking studies with other assessments demonstrated that Istation

Math can be used to project student proficiency on end-of-year assessments such as the ACT Aspire (Patarapichayatham \& Locke, 2020) and Ohio AIR (Patarapichayatham \& Locke, 2020). All information can be found on our website (www.istation.com).

## Background

## Istation Math Assessment

The Istation Math assessment is a computerized adaptive test (CAT) using the twoparameter Item Response Theory. Istation assessments gather and report frequent information about student progress in critical domains throughout and across academic years. The assessments accomplish this by delivering monthly tests that target critical areas to inform instruction. With adequate computer resources, it is possible to administer Istation assessments to an entire classroom, school, or district in a single day. Student results are immediately available online for teachers and administrators, illustrating each student's past and present performance and skill growth. Teachers are alerted when students are not making adequate progress so that the instructional program can be modified before a pattern of failure becomes established (Ketterlin-Geller, 2021).

Istation Math measures students' abilities and identifies deficits in critical areas to provide continuous differentiated instruction. Istation Math is available for prekindergarten through eighth grade students and has a continuous vertical scale that assesses math ability across these grades. In addition to detailed reports, Istation provides teachers and other school personnel with links to teaching resources and targeted intervention strategies (Ketterlin-Geller, 2021). Scaled scores range between 100 and 900. There are five performance levels for Istation Math:

- Level 1: at or below the 20th percentile rank
- Level 2: between the 21st and 40th percentile rank
- Level 3: between the 41st and 60th percentile rank
- Level 4: between the 61st and 80th percentile rank
- Level 5: at or above the 81st percentile rank.

## NWEA MAP Math Assessment

NWEA MAP Math tests are vertically scaled interim assessments administered in CAT mode. NWEA MAP Math is constructed to measure student achievements in kindergarten to twelfth grade and is aligned with the Common Core State Standards (CCSS). NWEA MAP Math scores are reported with a Rasch Unit (RIT) scale ranging from 100 to 350. There are three benchmarking assessment months: fall, winter, and spring. Because we focus on the linking study during the winter and spring benchmarking assessment months, Table 1 shows cut scores for these two assessment months. Because NWEA MAP Math does not have performance levels like a state summative test, they conduct linking studies between NWEA MAP Math and individual state summative tests. In general, students are classified into three performance categories; "Low" if they are in percentile ranks 1st to 39th, "Average" if their ability falls into the 40th - 79th, and "High" if they obtain 80th percentile ranks or higher.

Table 1. NWEA MAP Math Cut Scores

| Grade | Low (Winter) | Averace (Winter) | High (WiNTER) | Low (SPRING) | AVERAGE (Spring) | High (SPRING) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kindergarten | <147 | 147-159 | >159 | <154 | 154-166 | >166 |
| 1 | <167 | 167-180 | >180 | <173 | 173-187 | >187 |
| 2 | <181 | 181-194 | >194 | <186 | 186-200 | >200 |
| 3 | <193 | 193-207 | >207 | <198 | 198-212 | >212 |
| 4 | <202 | 202-218 | >218 | $<207$ | 207-223 | >223 |
| 5 | <211 | 211-227 | >227 | <215 | 215-232 | >232 |

## Methodology

## Analytical Sample

The analytic sample consisted of students who were in kindergarten through fifth grade in two school districts in Idaho and Texas in the 2022-2023 school year. Only students who had valid Istation Math and NWEA MAP Math scores were included in the analyses.

Table 2 presents the analytic sample breakdown by school district and grade. There were 1,269 students from District A and 3,755 from District B, accounting for 5,024 students. The largest proportion of students in District A and B consisted of White/non-Hispanic students. A full description of demographic characteristics for each district is available in Table 3.

Table 2. Sample Size by District and Grade

| Grade | $\mathbf{A}$ |  | $\mathbf{B}$ |
| :---: | :---: | :---: | :---: |
| K | 215 | 656 | 871 |
| 1 | 197 | 776 | 973 |
| 2 | 203 | 750 | 953 |
| 3 | 202 | 782 | 984 |
| 4 | 225 | 758 | 983 |
| 5 | 227 | 33 | 260 |

Table 3. Demographic Characteristics by District

| District | Demographic Characteristics | Percentage |
| :---: | :---: | :---: |
| A $N=1,269$ | Gender: Female | 47\% |
|  | Gender: Male | 53\% |
|  | Race/Ethnicity: White/Non-Hispanic | 77\% |
|  | Race/Ethnicity: Hispanic or Latino origin | 18\% |
|  | Race/Ethnicity: Asian or Other | 5\% |
| B $N=3,755$ | Gender: Female | 49\% |
|  | Gender: Male | 51\% |
|  | Race/Ethnicity: White/Non-Hispanic | 35\% |
|  | Race/Ethnicity: African American or Black | 15\% |
|  | Race/Ethnicity: Hispanic or Latino origin | 30\% |
|  | Race/Ethnicity: Asian or Other | 20\% |

## Analytical Approach

To provide teachers and administrators with the information they need to determine whether a student is likely to reach the Average category or above on the NWEA MAP Math assessment, the analysis first examined Pearson product-moment correlations to confirm the correlation in performance between the two assessments. Next, multinomial logistic regression determined the probabilities of reaching Average (level 2) or High (level 3) on the NWEA MAP Math assessment. The analysis used the Istation Math score as the predictor and the NWEA MAP Math levels as outcome variables. Students with Istation Math scores ranging from the 1st to the 99th percentile ranks were part of the analysis. A selection of 20 Istation Math scaled scores in MOY and EOY, corresponding to the following percentile ranks, was made: $5,10,15$, $20,25,30,35,40,45,50,55,60,65,70,75,80,85,90,95,99$. The model was adapted for each grade individually. The study focused on performance levels 2 and 3 .

The probability of achieving NWEA MAP Math performance level 2 (Average) or above is computed by adding the probabilities of levels 2 and 3 . The probability of achieving NWEA MAP Math performance level 3 (High) is the probability only for level 3. The
analyses were computed using Stata 18.0 software. Finally, classification accuracy analyses determined Istation Math cut points that assist in differentiating students who will or will not achieve level 2 Average or higher on the NWEA MAP Math assessment.

## Results

## Istation Math and NWEA MAP Math Descriptive Statistics

Table 4 presents the descriptive statistics for Istation Math and NWEA MAP Math performance by district and grade.

Table 4. Istation Math and NWEA MAP Math Mean Scores

| District | Grade | Istation BOY | Istation MOY | Istation EOY | MAP Fall | MAP Winter | MAP Spring |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | K | 311.97 | 395.55 | 475.13 | 147.50 | NA | 167.06 |
|  | 1 | 427.50 | 479.27 | 540.30 | 166.16 | NA | 182.29 |
|  | 2 | 459.91 | 504.87 | 538.89 | 184.98 | NA | 201.71 |
|  | 3 | 489.08 | 522.90 | 549.86 | 191.75 | NA | 205.99 |
|  | 4 | 504.20 | 534.90 | 573.38 | 201.51 | NA | 212.99 |
|  | 5 | 511.85 | 553.85 | 589.14 | 212.90 | NA | 224.85 |
| B | K | 302.48 | 380.79 | 430.26 | 144.81 | 153.45 | 162.45 |
|  | 1 | 409.00 | 475.04 | 513.38 | 163.58 | 171.23 | 179.88 |
|  | 2 | 460.11 | 494.86 | 517.07 | 175.79 | 184.20 | 191.30 |
|  | 3 | 483.54 | 507.58 | 531.63 | 189.83 | 196.69 | 203.13 |
|  | 4 | 509.08 | 532.64 | 555.72 | 202.07 | 207.02 | 213.38 |
|  | 5 | 526.95 | 552.94 | 576.18 | 213.64 | 216.79 | 220.50 |
| Combined | K | 305.71 | 385.70 | 442.76 | 145.50 | 153.45 | 163.83 |
|  | 1 | 412.97 | 476.59 | 520.11 | 164.13 | 171.23 | 180.32 |
|  | 2 | 459.89 | 496.26 | 521.17 | 177.84 | 184.20 | 193.44 |
|  | 3 | 484.41 | 511.31 | 536.37 | 190.24 | 196.69 | 203.75 |
|  | 4 | 508.69 | 533.08 | 560.34 | 201.95 | 207.02 | 213.30 |
|  | 5 | 516.58 | 553.72 | 587.68 | 213.00 | 216.79 | 224.28 |

Table 5 presents the proportion of students in each NWEA MAP Math level at MOY and EOY, respectfully, for the combined sample. At MOY, the largest proportion of students performed at the Average level for all grades except second grade, where the largest proportion performed at the Low level. At EOY, the largest proportion of students performed at the Average level for first through fifth grades. For kindergarten, the largest proportion of students performed at the High level.

Table 5. Percentage of Students by NWEA MAP Math Performance Level at MOY

| Benchmark <br> Period | Grade | Low MAP <br> Level | Average MAP <br> Level | High MAP <br> Level |
| :---: | :---: | :---: | :---: | :---: |
| MOY | K | $25 \%$ | $43 \%$ | $32 \%$ |
|  | 1 | $33 \%$ | $45 \%$ | $22 \%$ |
|  | 2 | $39 \%$ | $38 \%$ | $23 \%$ |
|  | 3 | $34 \%$ | $44 \%$ | $21 \%$ |
| EOY | 4 | $31 \%$ | $47 \%$ | $22 \%$ |
|  | 1 | $18 \%$ | $39 \%$ | $43 \%$ |
|  | 2 | $27 \%$ | $41 \%$ | $32 \%$ |
|  | 3 | $27 \%$ | $40 \%$ | $33 \%$ |
|  | 4 | $29 \%$ | $43 \%$ | $28 \%$ |
|  | 5 | $31 \%$ | $40 \%$ | $29 \%$ |

## Correlational Study: Istation Math and NWEA MAP Math

Table 6 shows the Pearson product-moment correlation coefficients between Istation Math scores and NWEA MAP Math scores for MOY and EOY for both districts combined. The coefficients for grades K through 5 range from .82 to .89 , indicating a strong relationship between Istation Math and the NWEA MAP Math assessment. If a student does well on Istation Math, then it is likely that the student will do well on the NWEA MAP Math assessment, particularly for grades K through 5. Figures la and 1b show the correlations between Istation Math and NWEA Map Math scores by grade at MOY and EOY benchmark periods. We did not run correlations for grade 5 at the winter benchmark due to insufficient observations that had both Istation Math and NWEA MAP scores.

Table 6. Pearson Product-Moment Correlation Coefficients between Istation and NWEA MAP

| Grade |  <br> NWEA MAP Winter |  <br> NWEA MAP Spring |
| :---: | :---: | :---: |
| $\mathbf{K}$ | $0.84^{*}$ | $0.82^{*}$ |
| $\mathbf{1}$ | $0.89^{*}$ | $0.85^{*}$ |
| $\mathbf{2}$ | $0.87^{*}$ | $0.85^{*}$ |
| $\mathbf{3}$ | $0.86^{*}$ | $0.86^{*}$ |
| $\mathbf{4}$ | $0.85^{*}$ | $0.85^{*}$ |
| $\mathbf{5}$ | NA | $0.85^{*}$ |

## Linking Study: Istation Math and NWEA MAP Math

Tables 7 through 12 are concordance tables derived from statistical linking procedures that directly link Istation Math scores and NWEA MAP Math assessment levels. Concordance tables serve as valuable tools for various stakeholders, including educators, parents, administrators, researchers, and policymakers, by offering essential information to assess students' academic performance. These tables provide a more comprehensive understanding of students' abilities and progress. Moreover, concordance tables aid in identifying strengths and weaknesses in specific subject areas, assisting in developing targeted interventions and support programs. Furthermore, these tables contribute to the establishment of consistent academic standards and expectations, promoting a unified approach to evaluating and enhancing educational outcomes. Fifth grade students at MOY are not included in the linking study due to insufficient observations with NWEA MAP scores.

The probabilities of meeting a NWEA MAP Math performance level were divided into low, medium, and high. Students with a probability of $\leq .330$ had a low probability of achieving a level. Those with a probability of .331-. 660 had a medium probability, and students with a probability of greater than $\geq .661$ had a high probability of achieving Average or higher.

## Probabilities for the Middle of the Year

The MOY tables show that students in Kindergarten need to be at the 50th percentile or above to have a high probability of reaching Average or higher; students in first grade need to be at the 60th percentile. The upper grades (2-4) have lower percentiles at 35 and 40, yielding a high probability of reaching Average or higher. These percentiles align with the NWEA MAP, where the range for Average is 40-79.

Table 7. Kindergarten and First Grade Proficiency Projection for Istation Math at MOY

| Grade | Overall Score | Percentile | Average Probability | Average | High Probability | High |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## MOY Istation and NWEA MAP Math at Winter Benchmarking

Figure 2 represents the MOY Istation Math percentiles associated with the probabilities of attaining the NWEA MAP Math Average performance level by grade.

Kindergarten students with an Istation Math score around 303-336 (30th to 45th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students who attained a score of 346 (50th percentile rank) or higher are projected to achieve the NWEA MAP Math Average level or higher. Students with an Istation Math score of around 463 (90th percentile rank) are projected to achieve the NWEA MAP Math High level.

First grade students with an Istation Math score around 434-451 (45th to 55th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 459 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 596 (99th percentile) have a high probability of reaching the NWEA MAP Math High level.

Second grade students who attained an Istation Math score around 471-484 (30th to 4Oth percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with scores higher than 490 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 546 (85th percentile) have a high probability of reaching the NWEA MAP Math High level.

Third grade students who attained an Istation Math score around 485-493 (25th to 30th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 499 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score
around 549 (75th percentile) have a high probability of reaching the NWEA MAP Math High level.

Fourth grade students who attained an Istation Math score around 503-510 (25th to 30th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 516 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 583 (85th percentile) have a high probability of reaching the NWEA MAP Math High level.

These results show that attaining the Average level or above on the NWEA MAP Math assessment varies by grade, with kindergarten and first grade students needing to score higher than the 50th-60th percentiles and second through fourth grade students needing to score higher than the 35th-45th percentiles, to have a high probability of attaining Average or higher.

Figure 2. MOY ISIP Reading Percentiles and NWEA MAP Math Average Probabilities by Grade

## Probabilities for the End of the Year

The following tables show the results from the linking study at EOY. Fifth grade is included in this study. While the number of observations in fifth grade is less than in the other grades, there was sufficient variability in the data to conduct a linking study at EOY. Results are similar to the MOY results.

## EOY Istation and NWEA MAP Math at Spring Benchmarking

Figure 3 represents the EOY Istation Math percentiles associated with the probabilities of attaining the NWEA MAP Math Average performance level by grade.

Kindergarten students with an Istation Math score around 334-371 (35th to 50th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students who attained a 384 (55th percentile rank) or higher are projected to achieve the NWEA MAP Math Average level or higher. Students with an Istation Math score of around 505 (90th percentile rank) are projected to achieve the NWEA MAP Math High level.

First grade students who attained an Istation Math score around 455-483 (50th to 65th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 493 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 620 (99th percentile) have a high probability of reaching the NWEA MAP Math High level.

Second grade students who attained an Istation Math score around 479-486 (30th to 35th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 493 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 560 (85th percentile) have a high probability of reaching the NWEA MAP Math High level.

Third grade students who attained an Istation Math score around 493-501 (25th to 30th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with scores higher than 508 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score
around 580 (85th percentile) have a high probability of reaching the NWEA MAP Math High level.

Fourth grade students who attained an Istation Math score around 518-532 (30th to 40th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 539 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 628 (95th percentile) have a high probability of reaching the NWEA MAP Math High level.

Fifth grade students who attained an Istation Math score around 532-554 (30th to 45th percentile ranks) had a medium probability of achieving the NWEA MAP Math Average level or higher. Students with a score higher than 560 had a high probability of reaching the Average level or higher. Students who attained an Istation Math score around 645 (95th percentile) have a high probability of reaching the NWEA MAP Math High level.

These results show that attaining the Average level or above on the NWEA MAP Math assessment varies by grade, with kindergarten and fifth grade students needing to score higher than the 50th-55th percentiles, second through fourth grade students needing to score higher than the 35th-45th percentiles, and first grade students needing to score higher than the 70th percentile, to have a high probability of attaining Average or higher.

Figure 3. EOY ISIP Reading Percentiles and NWEA MAP Math Average Probabilities by Grade

## Classification Accuracy: Istation Math and NWEA MAP Math

Classification accuracy was conducted to predict whether students in the sample would achieve Average level or higher on the NWEA MAP Math assessment. A higher classification accuracy rate indicates stronger congruence between Istation Math and NWEA MAP Math assessments. Classification accuracy was conducted for kindergarten through fifth grade Istation Math at MOY, Istation Math at EOY, and NWEA MAP Math assessment of Average level or higher. Classification accuracy analyses were performed to determine Istation Math cut points that could help differentiate students who would or would not attain Average or higher on the NWEA MAP Math assessment.

Classification accuracy of Istation cut scores were performed at the 30th, 35th, 40th, 45th, 50th, 55th, 60th, 65th, 70th, 75th, and 80th percentiles and NWEA MAP Average level or higher. The area under the curve (AUC), sensitivity, specificity, positive
predictive power, negative predictive power, and the overall rate were computed and compared to determine the best Istation Math cut point to identify students who would most likely meet the Average level or higher on the NWEA MAP Math assessment. Results in Table 13 show that the best cut scores vary by grade on Istation Math at MOY and EOY.

## MOY Classification Accuracy: Istation Math and NWEA MAP Math

The AUC ranged from 0.81 to 0.87 , indicating that the percentage of students correctly classified on the Istation Math with respect to the NWEA MAP was approximately $85 \%$ across grades. Sensitivity ranged from 0.85 to 0.92 , indicating that approximately $88 \%$ of students who performed below the cut point on Istation Math did not meet Average or above on NWEA MAP. Specificity ranged from 0.72 to 0.89 , indicating that approximately $82 \%$ of students who performed above the cut point on Istation Math met the Average or above on the NWEA MAP assessment. Istation Math accurately predicted meeting math proficiency on NWEA MAP about 85\% of the time. This analysis did not include fifth grade students due to an insufficient sample size.

## EOY Classification Accuracy: Istation Math and NWEA MAP Math

The AUC ranged from 0.85 to 0.89 , indicating that approximately $87 \%$ of students were correctly classified on the Istation Math with respect to the NWEA MAP across grades. Sensitivity ranged from 0.80 to 0.92 , indicating that approximately $87 \%$ of students who performed below the cut point on Istation Math did not meet the Average category or above on NWEA MAP. Specificity ranged from 0.83 to 0.95 , indicating that approximately $87 \%$ of students who performed above the cut point on Istation Math met the Average or above on the NWEA MAP assessment. Istation Math accurately predicted meeting math proficiency on NWEA MAP about 87\% of the time.

## Conclusion

This research establishes a significant positive link between students' scores in Istation Math and their NWEA MAP Math outcomes, particularly from kindergarten through fifth grade. Both MOY and EOY scores on Istation Math are reliable indicators for predicting NWEA MAP Math assessment performance. These correlations are particularly strong in the mentioned grades, with Pearson product-moment correlation coefficients ranging from 0.82 to 0.89 .

Furthermore, the findings reveal a consistent trend: as students achieve higher scores in Istation Math, their chances of reaching or surpassing the Average level on the NWEA MAP Math assessment increase. This pattern is evident across different grade levels, though the exact scores required for reaching the Average level vary. The classification accuracy analysis supports this, showing that about 85-87\% of students' performance can be accurately predicted based on their Istation Math scores.

These results highlight the utility of Istation Math as a tool for monitoring student progress and predicting their performance in key assessments like NWEA MAP Math. For educators and school administrators, these insights are invaluable for designing targeted interventions and enhancing learning outcomes. This study reinforces the role of Istation Math assessments in educational settings, proving their effectiveness in guiding instructional strategies and fostering student achievement.
