#  <br> Linking NWEA MAP <br> Reading to ISIP Reading 

Raffaela Wolf, PhD

December 2022

## Executive Summary

This study provides the proficiency projection of Istation's Indicators of Progress (ISIP ${ }^{\mathrm{TM}}$ ) Reading on the NWEA MAP Reading assessments for kindergarten through eighth grade. Classification accuracy is also provided. The analytic sample consisted of students in kindergarten through eighth grade in four school districts located in California, New Mexico, and Texas in the 2021-2022 school year. There were 1,867 students from District A; 3,898 students from District B; 1,770 students from District C; and 20,729 students from District D, accounting for a total of 28,264 students. Students took ISIP Reading at the beginning-of-the-year (BOY), middle-of-the-year (MOY), and end-of-the-year (EOY) assessment months and took NWEA MAP in the fall, winter, and spring assessment months.

The Pearson product-moment correlations of ISIP MOY and NWEA MAP Reading at winter benchmarking range from 0.59 to 0.83 , and for ISIP EOY and NWEA MAP Reading at spring benchmarking, from 0.66 to 0.83 . They indicate strong relationships between the ISIP Reading and the NWEA MAP Reading assessments.

The linking study between NWEA MAP and ISIP Reading was conducted using multinomial logistic regression. At MOY, students had to be between the $25^{\text {th }}$ and $50^{\text {th }}$ percentile ranks to achieve the NWEA MAP Average level. In order to attain the NWEA MAP High category, students had to be between the $85^{\text {th }}$ and $99^{\text {th }}$ percentile ranks on ISIP. At EOY, students had to be between the $20^{\text {th }}$ and $40^{\text {th }}$ percentile ranks to reach the NWEA MAP Average category, whereas percentile ranks between the $85^{\text {th }}$ and $99^{\text {th }}$ were needed to reach the NWEA MAP High category. In general, these findings suggest that high performance on ISIP is required to attain high scores on NWEA MAP.

Classification accuracy analyses were conducted. At MOY, the percentage of students correctly classified on ISIP Reading with respect to the NWEA MAP was approximately $79 \%$ across grades: $70 \%$ of students who performed below the cut point on ISIP Reading did not meet Average or above on the NWEA MAP, and $85 \%$ of students who performed above the cut point on ISIP Reading met Average or above on the NWEA MAP. ISIP Reading accurately predicted meeting ELA proficiency on the NWEA MAP about $80 \%$ of the time at MOY.

At EOY, the percentage of students correctly classified on the ISIP Reading with respect to the NWEA MAP was approximately $76 \%$ across grades: $74 \%$ of students who performed below the cut point on ISIP Reading did not meet Average or above on the

NWEA MAP, and $80 \%$ of students who performed above the cut point on ISIP Reading met Average or above on the NWEA MAP. ISIP Reading accurately predicted meeting ELA proficiency on the NWEA MAP about 80\% of the time at EOY.

## Introduction

This study provides the proficiency projection of Istation's Indicators of Progress (ISIP) Reading observed scores on the NWEA MAP Reading scores for kindergarten through eighth grade. Students took these two assessments during the same school year, and a correlational study and classification accuracy were also conducted.

Because students take ISIP Reading assessments monthly or three times per year under benchmarking assessment months and take NWEA MAP Reading three times per year under benchmarking assessment months, it is helpful to conduct a linking study between ISIP Reading and NWEA MAP Reading. Teachers and school administrators can use this information to prepare students for NWEA MAP Reading in the spring.

There are several linking studies we have conducted, such as linking ISIP assessments with STAAR (Patarapichayatham et al., 2013), Virginia SOL (Campbell, Sutter \& Lambie, 2019), Ohio AIR (LePlante, 2019), Renaissance STAR (Campbell, Sutter, Lambie \& Tinstman Jones, 2019), CMAS ELA (Patarapichayatham, 2019), Georgia Milestones (Patarapichayatham, 2016), Idaho SAT (Wolfe \& Ross, 2020), and PARCC (Cook \& Ross, 2020). All information can be found on our website (www.istation.com).

## Methodology

## ISIP Reading Assessments

ISIP Reading assessments feature a computer-adaptive testing (CAT) algorithm that uses two-parameter Item Response Theory. ISIP gathers and reports frequent information about student progress in critical domains throughout and across academic years. ISIP accomplishes this by delivering monthly tests that target critical areas to inform instruction. Student results are immediately available online for teachers and administrators, illustrating each student's past and present performance and skill growth. Teachers are alerted when students are not making adequate progress so that the instructional program can be modified before a pattern of failure becomes established (Mathes et al., 2015).

ISIP Reading measures students' ability and identifies deficits in critical areas to provide continuous differentiated instruction. ISIP Reading is available for prekindergarten through eighth grade students. Istation provides teachers and other school personnel with easy-to-interpret, web-based reports detailing student strengths and deficits and links to teaching resources and targeted intervention strategies (Istation, 2022). ISIP Reading uses a vertical scale that assumes student proficiency increases across different grade levels from prekindergarten through eighth grade, and it reports scaled scores ranging between 100 and 900. There are five performance levels for ISIP Reading:

- Level 1: at or below the 20th percentile rank
- Level 2: between the 21st and 40th percentile rank
- Level 3: between the 41st and 60th percentile rank
- Level 4: between the 61st and 80th percentile rank
- Level 5: above the 80th percentile rank

## NWEA MAP Reading Assessments

NWEA MAP Reading tests are vertically scaled interim assessments administered in CAT mode. NWEA MAP Reading is constructed to measure student achievements in kindergarten through grade 12 and is aligned with Common Core State Standards (CCSS). NWEA MAP Reading scores are reported with the Rasch Unit (RIT) scale ranging from 100 to 350 . There are three benchmarking assessment months: fall, winter, and spring. Because we focus the linking study on winter and spring benchmarking assessment months, Table 1 shows cut scores at these two assessment months. Because NWEA MAP Reading does not have performance levels like a state summative test, NWEA conducts linking studies between NWEA MAP Reading and individual state summative tests. In general, students are classified into three performance categories: "Low" if they are in the 1st to 39th percentile ranks, "Average" if their abilities fall into the 40th to 79th percentile ranks, and "High" if they obtain the 80th percentile rank or higher.

Table 1. NWEA MAP Reading Cut Scores and Performance Categories by Grade

| Grade | Low <br> (Winter) | Average <br> (Winter) | High <br> (Winter) | Low <br> (Spring) | Average <br> (Spring) | High <br> (Spring) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Kindergarten | $<143$ | $143-155$ | $>155$ | $\leq 149$ | $150-162$ | $>162$ |
| 1 | $<163$ | $163-176$ | $>176$ | $\leq 167$ | $168-182$ | $>182$ |
| 2 | $<177$ | $177-193$ | $>193$ | $\leq 181$ | $182-198$ | $>198$ |
| 3 | $<190$ | $190-206$ | $>206$ | $\leq 192$ | $193-210$ | $>210$ |
| 4 | $<198$ | $198-215$ | $>215$ | $\leq 200$ | $201-218$ | $>218$ |
| 5 | $<205$ | $205-221$ | $>221$ | $\leq 206$ | $207-223$ | $>223$ |
| 6 | $<210$ | $210-226$ | $>226$ | $\leq 210$ | $211-227$ | $>227$ |
| 7 | $<213$ | $213-230$ | $>230$ | $\leq 213$ | $214-231$ | $>231$ |
| 8 | $<216$ | $216-234$ | $>234$ | $\leq 216$ | $217-234$ | $>234$ |

## Analytic Sample

The analytic sample consisted of students who were in kindergarten through eighth grade in four school districts in California, New Mexico, and Texas in the 20212022 school year. There were 1,867 students from District A; 3,898 students from District B; 1,770 students from District C; and 20,729 in District D - accounting for a total of 28,264 students. The sample size by grade is available in Table 2. Students took ISIP reading in the beginning-of-the-year (BOY), middle-of-the-year (MOY), and end-of-the-year (EOY) assessment months, and they took the NWEA MAP in the fall, winter, and spring assessment months.

Table 2: Combined Sample Size by Grade

| Grade | Combined Sample Size |
| :---: | :---: |
| $\mathbf{K}$ | 3,643 |
| $\mathbf{1}$ | 3,876 |
| $\mathbf{2}$ | 4,409 |
| $\mathbf{3}$ | 3,309 |
| $\mathbf{4}$ | 3,536 |
| $\mathbf{5}$ | 3,101 |
| $\mathbf{6}$ | 2,188 |
| $\mathbf{7}$ | 2,334 |
| $\mathbf{8}$ | 2,228 |
| Total | 28,264 |

Table 3 provides a description of the demographics for gender and race/ethnicity by district. District A is in Texas, and there were 643 fourth graders, 421 fifth graders, 221 sixth graders, 301 seventh graders, and 281 eighth graders. District B is in New Mexico, and there were 1,199 kindergarteners; 1,139 first graders; 1,206 second graders; and 354 third graders. District C is in California, and there were 173 kindergarteners, 242 first graders, 301 second graders, 293 third graders, 304 fourth graders, 294 fifth graders, and 163 sixth graders. District D is also in Texas, and the sample was composed of 2,271 kindergarteners; 2,495 first graders; 2,542 second graders; 2,662 third graders; 2,589 fourth graders; 2,386 fifth graders; 1,804 sixth graders; 2,033 seventh graders; and 1,947 eighth graders.

Table 3. Demographic Characteristics by District

| District | Demographic Characteristic | Percentage |
| :---: | :---: | :---: |
| A: $N=1,867$ | Gender: Female | 49\% |
|  | Gender: Male | 51\% |
|  | Race/Ethnicity: White/Non-Hispanic | 30\% |
|  | Race/Ethnicity: African American or Black | 15\% |
|  | Race/Ethnicity: Hispanic or Latino origin | 35\% |
|  | Race/Ethnicity: Asian or Other | 20\% |
| B: $N=3,898$ | Gender: Female | 46\% |
|  | Gender: Male | 54\% |
|  | Race/Ethnicity: White/Non-Hispanic | 29\% |
|  | Race/Ethnicity: African American or Black | 2\% |
|  | Race/Ethnicity: Hispanic or Latino origin | 58\% |
|  | Race/Ethnicity: Asian or Other | 11\% |
| C: $N=1,770$ | Gender: Female | 53\% |
|  | Gender: Male | 47\% |
|  | Race/Ethnicity: White/Non-Hispanic | 2\% |
|  | Race/Ethnicity: African American or Black | 5\% |
|  | Race/Ethnicity: Hispanic or Latino origin | 91\% |
|  | Race/Ethnicity: Asian or Other | 2\% |
| D: $N=20,729$ | Gender: Female | 49\% |
|  | Gender: Male | 51\% |
|  | Race/Ethnicity: White/Non-Hispanic | 15\% |
|  | Race/Ethnicity: African American or Black | 4\% |
|  | Race/Ethnicity: Hispanic or Latino origin | 78\% |
|  | Race/Ethnicity: Asian or Other | 3\% |

Table 4 shows the mean scores of ISIP and the NWEA MAP by district and all four districts combined. Overall, students from combined districts had positive growth trajectories from the BOY to the MOY and EOY across all grades.

Table 4. ISIP Reading and NWEA MAP Reading Mean Scores

| District | Grade | Sample <br> size | ISIP <br> BOY | ISIP <br> MOY | ISIP <br> EOY | MAP <br> Fall | MAP <br> Winter | MAP <br> Spring |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | 4 | 643 | 488.93 | 512.26 | 528.93 | 198.31 | 202.56 | 206.43 |
| A | 5 | 412 | 512.36 | 531.43 | 546.51 | 204.63 | 208.37 | 211.75 |

|  |  |  |  |  |  |  |  |  |

## Analyses

Our analytic plan first evaluated the Pearson product-moment correlation between ISIP Reading and the NWEA MAP Reading assessments. Then we used multinomial logistic regression to determine probabilities for reaching Average (AV) or

High (HI) on the NWEA MAP Reading. Finally, we conducted a classification accuracy to determine cut points that best predict whether or not the student will meet the Average (AV) or High (HI) level on the NWEA MAP Reading.

## Linking Study Analysis

We used multinomial logistic regression to determine the probabilities of reaching the Average (AV) or High (HI) level on the NWEA MAP Reading. The ISIP scores are the predictor, and the NWEA MAP Reading performance levels are the outcome variable. Students who had ISIP scores between the 1st and 99th percentile ranks were included in the analysis. The model is fitted for each grade separately. A total of 20 ISIP Reading scaled scores in the MOY and EOY of kindergarten through eighth grades are selected, corresponding to the 1st through 99th percentile ranks with an increment of five. For the outcome variable in the multinomial logistic regression, performance levels are defined by the NWEA MAP Reading proficiency cut points (see Table 1 above).

The probability of the NWEA MAP Reading Average (AV) or above is computed by adding the probabilities of the Average (AV) and High (HI) levels. The probability of the NWEA MAP Reading High (HI) level is the probability of this level itself. The analyses are computed using R software with the nnet package.

## Classification Accuracy Analysis

Classification accuracy is a classification model. It measures the extent to which ISIP Reading scores accurately predicted whether students in the sample would achieve the Average (AV) level or higher on the NWEA MAP Reading.

Students were classified as "Not Proficient" or "Proficient" based on their NWEA MAP Reading scores. They were also classified as "Not Proficient" or "Proficient" based on their ISIP Reading scores. Table 5 shows a classification of students based on their observed ISIP Reading scores and status on their NWEA MAP Reading. Students classified in the true negative (TN) category were those both predicted to be Not Proficient based on the ISIP Reading cut scores and also classified as Observed Not Proficient based on the NWEA MAP Reading cut scores. Students classified in the true positive (TP) category were those both predicted to be Proficient based on the ISIP Reading cut scores and also classified as Observed Proficient based on the NWEA MAP

Reading cut scores. Students classified in the false positive (FP) category were those both predicted to be Proficient based on the ISIP Reading cut scores and classified as Observed Not Proficient based on the NWEA MAP Reading cut scores. Students classified in the false negative (FN) category were those both predicated to be Not Proficient based on the ISIP Reading cut scores and classified as Observed Proficient based on the NWEA MAP Reading cut scores. The overall classification accuracy was computed as the proportion of correct classifications among the entire sample by (TP+TN) / (TP+TN+FP+FN).

Table 5. Performance Classification Based on ISIP Reading and NWEA MAP Reading Scores

| Performance Classification | Not Proficient <br> (MAP) | Proficient (MAP) |
| :---: | :---: | :---: |
| Observed Not Proficient (ISIP) | True Negative | False Negative |
| Observed Proficient (ISIP) | False Positive | True Positive |

We conducted classification accuracy of ISIP cut scores at the 30th, 35th, 40th, 45th, 50th, 55th, 60th, 65th, 70th, 75th, and 80th percentiles and NWEA MAP Reading Average (AV) level or higher. The area under the curve (AUC), sensitivity (TN), specificity (TP), FP, FN, and the overall rate were computed and compared to determine the best ISIP Reading cut point to identify students who would most likely meet the Average (AV) level or higher on the NWEA MAP Reading in the winter and spring benchmark periods.

## Results

## Correlational Study

The Pearson product-moment correlations of ISIP MOY scores and NWEA MAP Reading winter benchmarking RIT scores and of ISIP EOY scores and NWEA MAP Reading spring benchmarking RIT scores are conducted and shown in Table 4. In the MOY, the correlations range from 0.59 to 0.83 , indicating strong relationships between ISIP Reading and the NWEA MAP Reading assessments once students take ISIP Reading at the MOY and NWEA MAP Reading in the winter benchmarking assessment month. At EOY, the correlations were slightly higher than MOY. They range from 0.66 to 0.83 , indicating strong relationships between ISIP Reading and the NWEA MAP Reading assessments when students take both assessments in spring.

Table 6. Pearson Product-Moment Correlations of ISIP Reading and NWEA MAP Reading

| Grade | ISIP MOY \& NWEA MAP <br> Winter | ISIP EOY \& NWEA MAP <br> Spring |
| :---: | :---: | :---: |
| Kindergarten | 0.59 | 0.81 |
| 1 | 0.74 | 0.83 |
| 2 | 0.78 | 0.81 |
| 3 | 0.82 | 0.82 |
| 4 | 0.83 | 0.81 |
| 5 | 0.79 | 0.78 |
| 6 | 0.78 | 0.72 |
| 7 | 0.76 | 0.66 |
| 8 | 0.76 | 0.73 |

# Linking Study: ISIP at MOY and NWEA MAP at Winter Benchmarking 

Tables 7 to 11 are concordance tables derived from statistical linking procedures that directly link ISIP Reading scores and NWEA MAP Reading assessment levels. Concordance tables provide helpful information for educators, parents, administrators, researchers, and policymakers to evaluate students' academic performance.

Kindergarteners who attained an ISIP Reading score around 294 (35th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 366 (90th percentile rank), they are likely to achieve the NWEA MAP High level.

First grade students who attained an ISIP Reading score of around 365 (50th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 453 (95th percentile rank), they are projected to achieve the NWEA MAP High level.

Second grade students who attained an ISIP Reading score around 430 (50th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 566 (99th percentile rank), they are projected to achieve the NWEA MAP High level.

Third grade students who attained an ISIP Reading score around 460 (40th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 548 (90th percentile rank), they are projected to achieve the NWEA MAP High level.

Fourth grade students who attained an ISIP Reading score around 485 (30th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 578 (85th percentile rank) or higher, they are projected to achieve the NWEA MAP High level.

Fifth grade students who attained an ISIP Reading score around 513 (30th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score of around 612 (85th percentile rank), they are projected to achieve the NWEA MAP High level.

Sixth grade students who attained an ISIP Reading score around 543 (35th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 651 (90th percentile rank) or higher, they are projected to achieve the NWEA MAP High level.

Seventh grade students who attained an ISIP Reading score around 554 (25th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score of around 675 (85th percentile rank), they are projected to achieve the NWEA MAP High level.

Eighth grade students who attained an ISIP Reading score of around 583 (25th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score of about 713 (85th percentile rank), they are projected to achieve the NWEA MAP High level.

In order to attain the NWEA MAP Average level, kindergarteners had to be at the 35th percentile rank, first graders at the 50th, second graders at the 55th, and third graders at the 40th percentile. Kindergarten students had to be at the 90th percentile or higher to achieve the NWEA MAP High level. Students in higher grades had different cut points for achieving the NWEA MAP Average level: 30th percentile rank for fourth and fifth grades, 35th percentile rank for sixth grade, and 25th percentile rank for seventh and eighth grades. To achieve the NWEA MAP High level, grades 4 and above had to attain the $85^{\text {th }}$ percentile rank or higher. This was consistent across the older grades except for sixth grade, where a 90th percentile rank was needed to achieve the NWEA MAP High level.

Table 7. Kindergarten and First Grade Proficiency Projection for ISIP at MOY

| Grade | Overall Score | Percentile | Average Probability | Average | $\begin{gathered} \text { High } \\ \text { Probability } \end{gathered}$ | High |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| K | 226 | 5 | 0.193 | No | 0.005 | No |
| K | 247 | 10 | 0.271 | No | 0.012 | No |

## Linking Study: ISIP at EOY and NWEA MAP at Spring Benchmarking

Kindergarteners who attained an ISIP Reading score of around 307 (25th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score of about 375 (80th percentile rank), they are projected to achieve the NWEA MAP High level.

First grade students who attained an ISIP Reading score around 374 (35th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 456 (85th percentile rank), they are projected to achieve the NWEA MAP High level.

Second grade students who attained an ISIP Reading score of around 440 (40th percentile rank) or higher are projected to achieve an NWEA MAP Average level or
higher. If they attain an ISIP Reading score around 594 (99th percentile rank), they are projected to achieve the NWEA MAP High level.

Third grade students who attained an ISIP Reading score around 458 (30th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 571 (90th percentile rank), they are projected to achieve the NWEA MAP High level.

Fourth grade students who attained an ISIP Reading score around 490 (25th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 598 (85th percentile rank) or higher, they are projected to achieve the NWEA MAP High level.

Fifth grade students who attained an ISIP Reading score around 514 (25th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score of around 627 (85th percentile rank), they are projected to achieve the NWEA MAP High level.

Sixth grade students who attained an ISIP Reading score of 536 (25th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 667 (90th percentile rank) or higher, they are projected to achieve the NWEA MAP High level.

Seventh grade students who attained an ISIP Reading score around 553 (20th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score of around 733 (95th percentile rank), they are projected to achieve the NWEA MAP High level.

Eighth grade students who attained an ISIP Reading score around 579 (20th percentile rank) or higher are projected to achieve an NWEA MAP Average level or higher. If they attain an ISIP Reading score around 745 (90th percentile rank) or higher, they are projected to achieve the NWEA MAP High level.

Overall, to achieve the NWEA MAP Average level, kindergarten and fourth through eighth grade students had to be at 25th percentile rank or higher, third graders at or above the 30th percentile rank, first graders at or above the 35th percentile rank, and second graders at or above the 45th percentile rank. To attain the NWEA MAP High level, the following percentile ranks were needed: 80th for kindergarten, 85th for first grade, 99th for second grade, 90th for third grade, 85th for fourth grade, 85th for fifth grade, 90 th for sixth grade, 95 th for seventh grade, and 90th for eighth grade.

## Classification Accuracy

Classification accuracy was conducted to predict whether students in the sample would achieve Average level or higher on the NWEA MAP Reading. A higher classification accuracy rate indicates stronger congruence between ISIP Reading and NWEA MAP assessments. We conducted a classification accuracy for kindergarten through eighth grade ISIP Reading at MOY, ISIP Reading at EOY, and NWEA MAP of Average level and higher. Classification accuracy analyses were performed to determine ISIP cut points that could help differentiate students who would or would not attain Average or High levels on the NWEA MAP. Table 17 shows the sample breakdown of MAP levels by benchmark period and grade.

Table 17. Percentage of Students in MAP Levels by Benchmark Period and Grade

| Benchmark <br> Period | Grade | Low MAP Level | Average MAP <br> Level | High MAP <br> Level |
| :---: | :---: | :---: | :---: | :---: |
| MOY | Kindergarten | $53 \%$ | $33 \%$ | $14 \%$ |
| MOY | 1 | $77 \%$ | $19 \%$ | $4 \%$ |
| MOY | 2 | $64 \%$ | $31 \%$ | $5 \%$ |
| MOY | 3 | $55 \%$ | $34 \%$ | $11 \%$ |
| MOY | 4 | $48 \%$ | $39 \%$ | $13 \%$ |
| MOY | 5 | $49 \%$ | $39 \%$ | $12 \%$ |
| MOY | 6 | $52 \%$ | $39 \%$ | $9 \%$ |
| MOY | 7 | $53 \%$ | $38 \%$ | $9 \%$ |
| MOY | 8 | $49 \%$ | $41 \%$ | $10 \%$ |
| EOY | 1 | $41 \%$ | $36 \%$ | $23 \%$ |
| EOY | 2 | $67 \%$ | $27 \%$ | $6 \%$ |
| EOY | 3 | $57 \%$ | $37 \%$ | $6 \%$ |
| EOY | 4 | $47 \%$ | $41 \%$ | $12 \%$ |
| EOY | 5 | $41 \%$ | $46 \%$ | $13 \%$ |
| EOY | 6 | $40 \%$ | $45 \%$ | $15 \%$ |
| EOY | 7 | $44 \%$ | $43 \%$ | $13 \%$ |
| EOY | 8 | $46 \%$ | $43 \%$ | $11 \%$ |
| EOY |  | $42 \%$ | $44 \%$ | $14 \%$ |

We conducted classification accuracy of ISIP cut scores at the 30th, 35th, 40th, 45 th, 50 th, 55 th, 60 th, 65 th, 70th, 75 th, and 80 th percentiles and NWEA MAP Average level or higher. The area under the curve (AUC), sensitivity, specificity, positive predictive power, negative predictive power, and the overall rate were computed and compared to determine the best ISIP Reading cut point to identify students who would most likely meet the Average level or higher on the NWEA MAP. Results show that the best cut scores vary by grade on ISIP at MOY and EOY.

Table 18 shows results at the MOY: the AUC ranged from 0.70 to 0.83 , indicating that the percentage of students correctly classified on ISIP Reading with respect to the NWEA MAP was approximately $76 \%$ across grades. Sensitivity ranged from 0.69 to 0.83 , indicating that about $74 \%$ of students who performed below the cut point on ISIP Reading did not meet the Average level or above on the NWEA MAP. The specificity ranged from 0.71 to 0.89 , indicating that approximately $80 \%$ of students who performed above the cut point on ISIP Reading were likely to meet the Average level or above on the NWEA MAP. ISIP Reading accurately predicted meeting proficiency on the NWEA MAP about $80 \%$ of the time at the MOY.

Table 18. Classification Accuracy Indices at MOY

| Grade | Cut Point | AUC | Sensitivity | Specificity |
| :---: | :---: | :---: | :---: | :---: |
| Kindergarten | $35^{\text {th }}$ | 0.70 | 0.69 | 0.71 |
| 1 | $45^{\text {th }}$ | 0.75 | 0.76 | 0.74 |
| 2 | $40^{\text {th }}$ | 0.82 | 0.83 | 0.81 |
| 3 | $35^{\text {th }}$ | 0.83 | 0.81 | 0.84 |
| 4 | $35^{\text {th }}$ | 0.83 | 0.80 | 0.85 |
| 5 | $30^{\text {th }}$ | 0.83 | 0.83 | 0.82 |
| 6 | $30^{\text {th }}$ | 0.83 | 0.83 | 0.88 |
| 7 | $30^{\text {th }}$ | 0.81 | 0.75 | 0.87 |
| 8 | $30^{\text {th }}$ | 0.78 | 0.68 | 0.89 |

Table 19 shows results at EOY: the AUC ranged from 0.76 to 0.84 , indicating that the percentage of students correctly classified on ISIP Reading with respect to the NWEA MAP was approximately $80 \%$ across grades. Sensitivity ranged from 0.66 to 0.81 , indicating that approximately $74 \%$ of students who performed below the cut point on ISIP Reading did not meet the Average level or above on the NWEA MAP. The specificity ranged from 0.74 to 0.94 , indicating that approximately $84 \%$ of students who performed above the cut point on ISIP Reading were likely to meet the Average level or above on the NWEA MAP. ISIP Reading accurately predicted meeting proficiency on the NWEA MAP about $80 \%$ of the time at the EOY.

Table 19. Classification Accuracy Indices at EOY

| Grade | Cut point | AUC | Sensitivity | Specificity |
| :---: | :---: | :---: | :---: | :---: |
| Kindergarten | 30th | 0.81 | 0.77 | 0.85 |
| 1 | 40th | 0.76 | 0.79 | 0.74 |
| 2 | 40 th | 0.84 | 0.80 | 0.88 |
| 3 | 30th | 0.82 | 0.81 | 0.84 |
| 4 | 30th | 0.81 | 0.80 | 0.83 |
| 5 | 30th | 0.82 | 0.78 | 0.86 |
| 6 | 30th | 0.83 | 0.80 | 0.86 |
| 7 | 30th | 0.80 | 0.70 | 0.89 |
| 8 | 30th | 0.80 | 0.66 | 0.94 |

This study demonstrates how ISIP scores predict students' performance on the NWEA MAP in reading. Results vary by grade and by benchmarking assessment months. Students in performance level 2 or higher are projected to achieve the NWEA

MAP Average level or higher. However, they have to be in performance level 4 or 5 (at or above the 61st percentile) to achieve the NWEA MAP High level.

The results confirm a positive relationship between the ISIP Reading and NWEA MAP Reading assessments. While these results are promising, it must be understood that predicting a student's achievement on the NWEA MAP Reading assessment is not a certainty, as a student's score may be affected by other factors that may not be reflected in their reading ability as measured by ISIP Reading..
